Collins Aerospace Landing Systems
Document 200 - Approved Processors

Data Updated: December 9, 2021

Revision	Document 200 Text - Summary of Changes	Date	By
NC	Original	1/16/2009	CJB
A	Update to current practice	9/30/2010	CJB
B	Added second last sentence to 5.0 fourth paragraph, corrected Document 300 reference.	5/23/2012	CJB
C	Added Notes Tab	9/18/2012	CJB
D	Entire document: UTAS was Goodrich	4/16/2013	CJB
E	Added DDTC note 6 to Notes tab, and DDTC data to Listing tab	9/19/2013	CJB
F	Added STRESS RELIEF note 7 to Notes tab.	12/3/2013	CJB
G	Added Nadcap Exceptions tab, revised Nadcap reqm'ts table, combined Note 7 into Note 1, revised Note 5.	4/11/2014	CJB
H	Added Note 7 to Notes tab, paint touch-up to exceptions tab	8/19/2014	CJB
J	Text tab: Content Server was LiveLink, 4.2 added description of fourth thru sixth tabs Nadcap Exceptions tab: revised CMSP to include the option for Nadcap AC7109/8 accreditation for the grinding of HVOF	3/13/2015	CJB
K	Revised note 6 on Notes tab to differetiate ITAR vs. EAR controlled military programs for the DDTC license. Added Export Ctrl tab.	4/24/2015	CJB
L	Landing Systems was Landing Gear, LS was LG, LS-SBU-A001-SQA was Document 300. Add ISO17025 for NDT.	4/15/2016	CJB
M	Revised the naming of the special processes in the SQA database and thus also in Document 200.	6/16/2016	CJB
N	Revised the naming of the special processes on the "Processes w RPN & Nadcap reqm't" tab.	8/2/2016	CJB
P	Entire document: Now *Collins Aerospace,* was UTAS. Doc 200 Text tab: Added definition for Raw Material. Changed 6.0 and 7.0 to reference the LS-SBU-A001-SQA Notes tab: clarified Stress Relief Processes tab: Added Composites, Pre-penetrant Etch, Manual Peen, Brazing and Sintering. Nadcap Exceptions tab: Removed Pre-pen Etch as an exception. Clarified scope of Nadcap mandate for grinding.	5/10/2019	CJB
Q	Added note 8 to Notes tab regarding the stripping of plating	6/26/2019	CJB
R	Added Definition for Raw Material	6/9/2020	CJB
S	Wipe-on primer added to Nadcap/Doc 200 exceptions	10/6/2020	CJB
T	Updated *Processes w RPN & Nadcap reqmt* tab, and updated *Nadcap Exceptions* tab with SP's w/o specifications	2/3/2021	CJB
U	Updated Nadcap Exemptions regarding local touch-up to supplementary chromate treatment on plating	3/31/2021	CJB
V	Revised Note 6 text, removed DDTC column from Doc 200 listing	6/7/2001	TAS
W	Updated reference from LS-SBU-A001-SQA to LS-SBU-A001-SQM and current sections	8/26/2021	TAS

1.0 Purpose

The purpose of this document is to a) identify special processes that require Collins Aerospace Landing Systems (hereafter referred to as Collins LS) approval of sources performing the process, and to b) provide a list of approved sources for these processes.

2.0 Applicability

The COLLINS LS Document 200 is applicable to suppliers and sub-tier sources of special processes where COLLINS LS LS-SBU-A001-SQM is invoked by reference in COLLINS LS purchase orders or LTA's (Long Term Agreements). In the event of any conflict between this document and LS-SBU-A001-SQM, LS-SBU-A001-SQM takes precedence. No deviation from the requirements contained within this document is permitted unless specifically defined in LS-SBU-A001-SQM, or with written concurrence of COLLINS LS Supplier Quality Assurance.

The requirements of this document do not apply for "Raw Material" purchased to a metallic raw material specification (AMS, MIL, QQ-A, etc.) unless the processor is specifically required by applicable specifications.

3.0 Responsibility

COLLINS LS Supplier Quality Assurance is responsible for the management and administration of the requirements contained within this document.

COLLINS LS approved suppliers of product or services, where LS-SBU-A001-SQM is invoked on the pertinent purchase order or LTA's, are responsible to comply with all applicable requirements contained within this document.

COLLINS LS approved processors shall operate under a QMS Quality Management System (i.e. AS9100, Nadcap AQS, ISO17025, ISO9001, etc. as recognized by the applicable Nadcap task group) to obtain and maintain approval status. A QMS registration certificate can serve as proof of compliance; otherwise a LS audit for compliance may be required.

COLLINS LS approved processors shall maintain Nadcap certification for those processes that require Nadcap certification. Document 200 defines the processes that require Nadcap certification.

4.0 General

4.1 Reference Documents

Document No.	Title
LS-SBU-A001-SQM	LS Supplier and Product Quality Requirements

4.2 Definitions

Approved Processor listing: The listing of special processes, individual process specifications, and the sources approved by COLLINS LS to perform these processes to the noted specifications. The COLLINS LS authorized Approved Processor listing is an Excel file located on Content Server. The Excel file has seven worksheets. The first worksheet has this requirements text, the second worksheet has the Approved Processor list, the third worksheet has a listing of revisions to the list, the fourth has Notes, the fifth lists which aircraft platforms require export control, the sixth lists the controlled processes with their RPN and Nadcap accreditation requirement, and the seventh lists the exceptions to Nadcap accreditation requirements.

Approved Processor: A company that has been granted approved status for performing specific special processes as defined by the Approved Processor Listing. This approval is based on compliance to the quality system requirements of this document, (with few exceptions) Nadcap accreditation for the process, and compliance to the listed process specification(s).

Approved Supplier: A company that has been granted approved status for supplying product to COLLINS LS based on compliance to the quality management system requirements of LS-SBU-A001-SQM.

Raw Material: Raw Material is typically a bar, plate, tube, etc. that has a heat lot number, but not a specific part number. Upon the event of a section of material being cut off from the raw material, and given a production part number, it is no longer raw material.

Special Processes: Only those processes listed on the Processes tab (sixth tab) are considered by COLLINS LS to be controlled special processes that require the entity performing the process to be pre-approved by COLLINS LS. This may include processes that do not require approval by COLLINS LS customers and may not include processes for which approval is required by COLLINS LS customers.

5.0 Approved Processor Listing

COLLINS LS Supplier Quality Assurance is responsible for maintaining the Approved Processor listing. The listing is revised as changes are received, reviewed, and approved by the Supplier Quality Assurance organization. The listing as posted on Content Server is refreshed on a periodic basis, approximately monthly, or as often as required.

It is the responsibility of approved suppliers to regularly review the listing to determine approval status of sources being used.

Document 200 approvals are address or site specific. When special process companies are comprised of more than one physical site, each physical site shall be approved individually by address in order to be contracted for use on LS product.

The listing will only contain specifications that are COLLINS LS specifications, government issue specifications, or industry standards. COLLINS LS's customers (e.g. Airbus, Boeing, Lockheed, etc.) do not permit LS to list approval to their specifications; hence their specifications (e.g. BAC's, PS's, 5PTP's, etc.) will not appear in the listing. When COLLINS LS customer controlled processes are required, (e.g. Boeing BAC's, PS's, Lockheed 5PTP's, etc.), selected process sources must be listed in both Document 200 as approved for quality system, and also be in the customer's listing (e.g. Boeing D1-4426, Lockheed QCS-001, etc.) as approved for the controlled process. Approval to perform a customer approved special process on LS product is limited to the Special Processes approved for this company as listed on LS Document 200. Refer to LS-SBU-A001-SQM paragraph 30.5.2.

COLLINS LS approval of a processor does not guarantee product processed by that processor is acceptable and use of approved processors does not relieve the COLLINS LS supplier from the obligation to provide finished product in compliance with purchase order and engineering requirements.

Processor, specification, and/or process approvals listed on Doc 200 may be revoked at any time by LS due to various reasons that include but are not limited to: Nadcap audit failures, lack of work being performed on LS product, processor initiated escapes and/or disclosures, changes in equipment at approved sources (no longer performing certain special processes), relocation of approved sources, site closures at approved sources, modifications to specifications.

6.0 Special Process Specification Requirements

See LS-SBU-A001-SQM section 5.

7.0 Processor Approval Process

See LS-SBU-A001-SQM section 30.

COLLINS LS SQM will perform periodic surveillance of approved processors as deemed necessary to maintain approval status.

Collins Aerospace Landing Systems

Document 200 Approved Processors - Notes

Notes

1 Stress relief: Any processor that is approved to perform stress relief as a special process is approved to perform stress relief per any applicable specification.
The approved temperature range is up to the temperature noted in the Limitations field.
Any restrictions noted in the Limitations field still apply.

2 Anodize: Any approval for anodize Type I covers both Type I and Type IB.
Any approval for anodize Type II covers both Type II and Type IIB.

3 Embrittlement Relief: For processes that are potentially embrittling (i.e. plating, nital etch, etc.) that require a post-process hydrogen embrittlement bake, processors that are approved for these processes are, by inference, approved for the hydrogen embrittlement bake.

4 Calibration and test laboratories: Calibration and test laboratory services are not included in the scope of Document 200.
Control of calibration and test laboratory services shall be a part of the supplier's QMS as per AS9100 section 7.4.1.

5 Nadcap: Special Processes that require Nadcap certification are identified on the *Processes w RPN & Nadcap reqm't* tab.
Processors who are limited to performing a special process in local areas only are generally exempt from the Nadcap requirement.
Exceptions are noted on the *Nadcap Exceptions* tab.

6 All Collins approved Processors located in the United States and Canada working on ITAR controlled military parts, sent either directly from a Collins facility or from a Collins supplier, must be registered with the US Directorate of Defense Trade Controls. If the Processor is processing ITAR controlled military hardware for Collins Aerospace Landing Systems, it must obtain a registration which is outlined in the ITAR (International Traffic in Arms Regulations) 22 CFR 122 (US Export Controls).
EAR controlled military parts do NOT require the DDTC license. See the Export Ctrl tab for a listing of ITAR and EAR programs.

7 Paint, Local touch-up: Entities that perform only local paint touch-up do not have to be approved on Document 200, nor Nadcap approval.
Local paint touch-up is defined as: manual application with brush (or equivalent) covering less than 5% of the part's painted area up to 12 square inches maximum total touch-up area.

8

Stripping of Plating: Entities that are approved for the application of plating of a specific type (i.e. Special Process code starts with CP07, CP08, CP09, CP10, or CP13) are considered to be approved for the stripping of the same type of plating. For example, a company that is approved to chrome plate is also considered approved to strip chrome plate. A company approved to anodize is considered approved to strip the anodize. The resulting stripping process must still comply with contractual, engineering and specification requirements.

Military Program Export Controls

The following programs are ITAR controled and **require** a DDTC license

F-35 CTOL
F-35 STOVL
F-35 CV
F-15
F-18
IDF
F-22
B1
1018
1032

The following programs are EAR controled and do NOT require a DDTC license

C-17
AH-64
F-16
E-2 A/B/C/D
V-22
SH-60
C2A
EA-6B
E2 Haweye

CP12 - TITANIUM CLEANING	3	Yes
CP13 - PLATING, BRUSH CADMIUM	9	Yes *
CP13 - PLATING, BRUSH NICKEL	9	Yes *
CP13 - PLATING, BRUSH ZINC NICKEL	9	Yes
CP13 - PLATING, BRUSH, OTHER	9	Yes
CP14 - STRIPPING, HVOF	9	Yes
CP14 - STRIPPING, AS A SUB-CONTRACT PROCESS	3	Yes
CP15 - PRE-PENETRANT ETCH	5	Yes
CT - GRINDING, HVOF	5	Yes
CT - HVOF	5	Yes
CT - PLASMA ARC SPRAY	5	Yes
CT - STRIPPING, HVOF	3	Yes
ETG - CONFORMAL COATING, PARYLENE	3	Yes
HT - BRAZING	5	Yes
HT - HEAT TREAT	3	Yes
HT - HOT ISOSTATIC PRESSURE	5	Yes
HT - SINTERING	3	Yes
HT - STRESS RELIEF	9	No
NA - COATING, VACUUM IMPREGNATED CHROME	3	No
NA - INSPECTION, ROLLSCAN	1	No
NA - ISOTROPIC SUPERFINISHING	3	No
NA - ROLLER BURNISHING	3	No
NA - SWAGING (CONTROLLED DEFORMATION)	9	No
NDT - INSPECTION, LIQUID PENETRANT	5	Yes
NDT - INSPECTION, MAGNETIC PARTICLE	5	Yes
NDT - INSPECTION, RADIOGRAPHIC	5	Yes
NDT - INSPECTION, TEMPER ETCH	9	Yes *
NDT - INSPECTION, ULTRASONIC	5	Yes
NDT - PRE-PENETRANT ETCH	5	Yes
NM - EDM (Electro Discharge Machining)	5	Yes
SE - MANUAL PEENING	5	Yes
SE - FLAPPER / ROTO PEENING	5	Yes *
SE - SHOT PEEN	5	Yes
WLD - BRAZING	5	Yes
WLD - WELDING	5	Yes

* See *Nadcap Exceptions* tab

Exceptions to UTAS LG Nadcap Accreditation Mandate

The following items are exceptions to the Collins mandate for Nadcap processes to be performed by a Nadcap certified source (these exceptions are subject to change):

AQS AEROSPACE QUALITY SYSTEM:

- Not required when supplier has AS9100 or AS9110 third-party registration.
  Note: suppliers without third party recognition of their QMS will need to be audited by Collins LS as compliant to AS9003.

CP CHEMICAL PROCESS Technology for:

- Brush cadmium and/or brush nickel plating when the supplier has no other chemical processes that require Nadcap approval.
- Local chemical conversion (alodine) on aluminum components.
- Local touch-up to supplementary chromate treatment on cadmium plating, cadmium-titanium plating, zinc-nickel plating, or IVDA coating.**
- Local paint touch-up, defined as: manual application with brush (or equivalent) covering less than 5% of the part's painted area up to 12 square inches maximum total touch-up area.**
- Wipe-on primer (often on chrome plate or cadmium plated threads) as per drawing requirements.**
- Etch inspection for hardening / re-tempering burns when the method is local swab only, and the supplier has no other Chemical processes or NDT processes that require Nadcap approval.
- Pre-cleaning for weld preparation.**

CT COATING

- Vacuum impregnation of chrome plate.

HT HEAT TREATMENT Technology for:

- Stress Relief
- Hydrogen Embrittlement Relief **
  (Clarification: a Chemical Process or Weld audit shall include a review of the adequacy of the Embrittlement Relief or Stress Relief in conjunction with that special process audit, if the facility has that capability)

SE SURFACE ENHANCEMENT for:

- Self-contained rotary (flapper) peen when the supplier has no other surface enhancement processes that require Nadcap approval.
- Manual and/or portable shot peening when used for repair/rework only.
- Roller burnishing for beneficial compressive stress

CMSP CONVENTIONAL MACHINING as a SPECIAL PROCESS for:

- All machining and grinding, except:
  - Grinding of chrome plate on high strength steel (> 180ksi UTS) is mandated to be Nadcap CMSP AC7126/5 certified.
  - Grinding of HVOF on high strength steel (> 180ksi UTS) is mandated to be either Nadcap CMSP AC7126/5 certified or Nadcap CT AC7109/8 certified.

Special Processes without specification requirements

- Where the engineering product definition calls for a special process and does not define any particular specification for the special process.

MRO Where the Processor/Process/Specification is identified as limited to MRO only, no Nadcap certification is required.**

** These processes are not listed on Document 200.
